

Temperature Sensor

Monitor your temperature sensitive locations with a high degree of accuracy

Check your temperature readings remotely via the Guardian Eye Sixth Sense app.

- Sensors can be used indoors as well as outdoors
- Sensors transmit every 60 min with 15 minute temperature readings
- Receive a daily “health status” ensuring sensor availability
- Easy to install
- Connects automatically to an IoT-specific network
- Battery-powered, with battery status available on the Guardian Eye Sixth Sense app

Product Overview

IoT (Internet of Things) provides us with the ability to add limited intelligence to the appliances and infrastructure we use every day. By adding Guardian Eye Sixth Sense sensors to your life, you'll be able to view the change in condition of your appliances or infrastructure via our Guardian Eye Sixth Sense application, saving valuable time and money in the process.

The Guardian Eye Sixth Sense Temperature Sensor provides regular temperature readings of a temperature-sensitive place or location, including your greenhouse, storeroom, or baby's room, and can be used indoors as well as outdoors.

The sensors require very little DIY skills to install and connect automatically to an IoT-specific network, so you don't have to worry about adding extra burden to your home Wi-Fi network.

The sensors are also battery-powered, meaning load shedding or power cuts won't affect them at all. The life-span of the batteries is determined by the number of activities your sensor is reporting on, and the battery status can be viewed via the Guardian Eye Sixth Sense application on any connected device, including smartphones, laptops, or PCs.

How it Works

Features and Benefits

Robust design

The sensors can be used indoors as well as outdoors.

Battery-powered

No need to worry about an unreliable, external power supply or additional cost to your electricity bill.

Accurate temperature records

Gain access to accurate temperature readings over a period of time via the Guardian Eye Sixth app on any connected device.

Easy to install

No special skills or tools are needed to install the sensors.

Flexible design

The sensor can be installed in any location and can be easily moved to a new location when needed.

No additional network required

Our sensors connect automatically to an IoT specific network.

Can be used
indoors as well
as outdoors.
