

GPS Tracker

Keep tabs on the location of your most prized assets at all times.

Attaches easily to any asset or person and sends accurate GPS positioning.

- Sensors can be used indoors as well as outdoors
- Will only report on changing conditions to preserve battery life
- Receive a daily “health status” ensuring sensor availability
- Easy to install
- Connects automatically to an IoT-specific network
- Battery-powered, with battery status available on the Guardian Eye Sixth Sense app

Product Overview

IoT (Internet of Things) provides us with the ability to add limited intelligence to the appliances and infrastructure we use every day. By adding Guardian Eye Sixth Sense sensors to your life, you'll be able to view the change in condition of your appliances or infrastructure via our Guardian Eye Sixth Sense application, saving valuable time and money in the process.

The Sixth Sense GPS Tracker is a battery-operated tracking sensor that connects automatically to an IoT-specific network, providing you with an accurate GPS position of your most valuable assets. The GPS Tracker is small, robust and flexible, allowing you to attach it to anything that needs tracking. There's no need to switch the sensor on or off as it's activated by movement.

The sensors require very little DIY skills to install and connect automatically to an IoT-specific network, so you don't have to worry about adding extra burden to your home Wi-Fi network. The sensors are also battery-powered, meaning load shedding or power cuts won't affect them at all.

The life-span of the batteries is determined by the amount of activities your sensor is reporting on, and the battery status can be viewed via the Guardian Eye Sixth Sense application. The data captured can be viewed remotely from any connected device, including a laptop, PC or smartphone.

How it Works

Features and Benefits

Easy to install

No special skills or tools are needed to install the sensors.

Robust, flexible design

Attach these sensors to anything that needs tracking - indoors or outdoors.

No additional network required

Our sensors connect automatically to an IoT-specific network.

Battery-powered

No need to worry about an unreliable, external power supply or additional cost to your electricity bill.

load shedding
or power cuts won't
affect them at all
