

# Smart Asset Tracking

## An IoT (Internet of Things) universal GPS tracker that fits easily onto any movable asset

- Remote GPS monitoring of any movable asset
- Long battery life with user-replaceable batteries
- Rugged, robust and low-profile casing
- Easy to install
- Customisable geo-fencing capabilities
- Configurable motion alerts

## Product Overview

Gone are the days when you have to wonder where your most valuable assets are. **Guardian Eye Smart Asset Tracking** can be used to monitor the location of any movable business asset - from trailers to mobile toilets, construction vehicles, shipping containers, recycling bins, golf carts or delivery bikes.

It can also act as a **back-up device** for company vehicles with tracking units already installed. If it moves, you can track it. The device can be easily and **securely attached to any asset**, and the same device can be re-used on other assets if needed.

The batteries can last up to two years plus (depending on settings chosen) and are user replaceable. The device connects automatically to an IoT-specific network and the information from your asset is **accessible from anywhere** via the Guardian Eye IoT platform.

Device transmission settings, various alerts and reports can also be **set-up and remotely adjusted** via the Guardian Eye IoT platform to suit your requirements - this includes setting up **geo-fences** (virtual boundaries). As it's highly resistant to dust and water, the asset tracker can be used indoors as well as outdoors, in **any type of environment**.

# How it Works

## Features and Benefits

### Attaches to any asset

The device can be attached to any type of movable asset.

### Remotely customisable settings

Access your information and change your settings from wherever you happen to be via the Guardian Eye IoT platform.

### Connects automatically

No additional Internet or Wi-Fi required - which means it won't deplete your data.

### User-replaceable batteries

Uses three AA batteries that can last up to two years plus, depending on user settings. The devices can work anywhere, without the requirement of external power.

### Rugged, robust low-profile casing

The device is IP 67-rated, which makes it ideal for tracking assets in harsh environments.

### Easy to install

No special tools or technical skills are required.

Provides tracking  
on any asset.
