

Guardian Eye CCTV

A Comprehensive CCTV Solution to Manage Risk Factors at any Property

Guardian Eye analyses the risk factors and combines best breed of technology with AI analytics to deliver the desired outcome.

- Turnkey solutions to manage property risk factors;
- 24/7/365 Nerve Centre and technical support;
- Purpose-built systems and software to address risk factors;
- Reliable record-keeping for evidence purposes;
- Complete view of the premises from a centralised location;
- Reduced guarding costs.

Product Overview

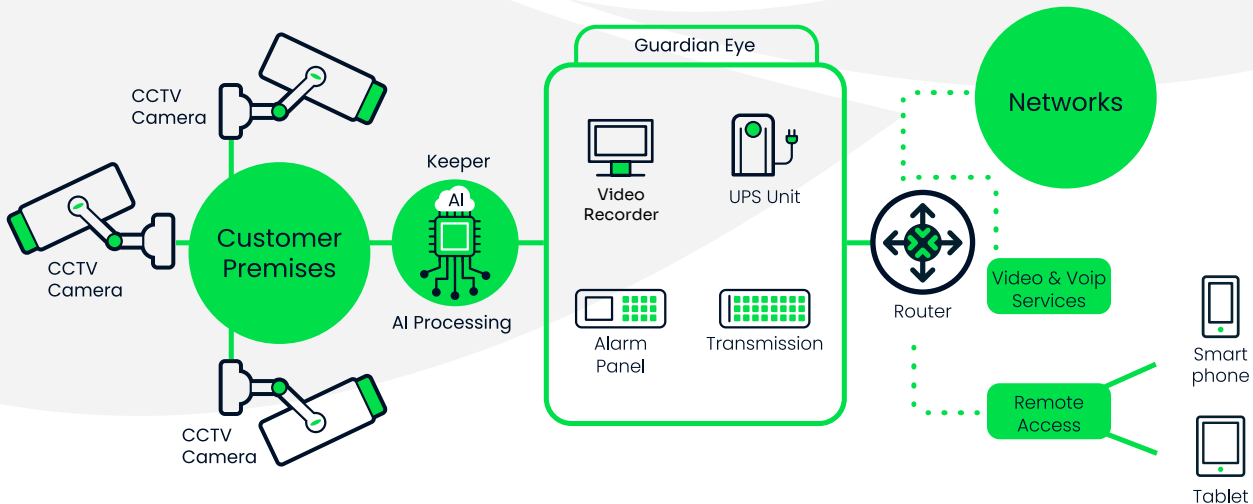

Guardian Eye focuses on **risk assessment and management** with the use of sensors, cameras and intelligent software. The design, build and implementation is focused on the risks identified. Solution building can be from the ground up or an expansion of your current systems, with every solution purpose-built to your exact requirements.

Traditional CCTV systems are **analogue or IP based** solutions, going from an edge device to a recording device. Guardian Eye has moved away from post event incidents to start using traditional solutions to our advantage.

We design and build every **CCTV solution** out of our control room to ensure every aspect has been taken into consideration.

Guardian Eye CCTV isn't just for capturing video footage and evidence recordings, but to **enhance all aspects of your day-to-day operations** too.

How it Works

Features and Benefits

Better guarding

CCTV eliminates guarding-related problems, such as intimidating of personnel, collusion by guards and ineffective patrolling.

Smarter guarding

Because it's done virtually, you can check in as often as you like, which means criminals are unable to study and determine your patrol times.

Guaranteed service delivery

With regular checks on cameras and reports on irregular activities like open gates and technical systems faults, we ensure you get the safety solution you paid for.

Reduced security costs

Minimise the costs related to traditional guarding services by allowing us to patrol your premises visually.

**Real-time surveillance
and crime prevention**
