

Intelligent Guarding

We'll monitor and control your business premises remotely to improve on-site safety

Our secure, cost-effective technology with advanced analytics reduces false alarms and offers an alternative to on-site monitoring solutions.

- Easy integration with legacy CCTV systems
- Independent from any security company
- Reduced costs and increase ROI on site
- No collusion with on-site security
- View cameras remotely with instant reset
- Advanced Analytics provide 99% accurate incident detection

Product Overview

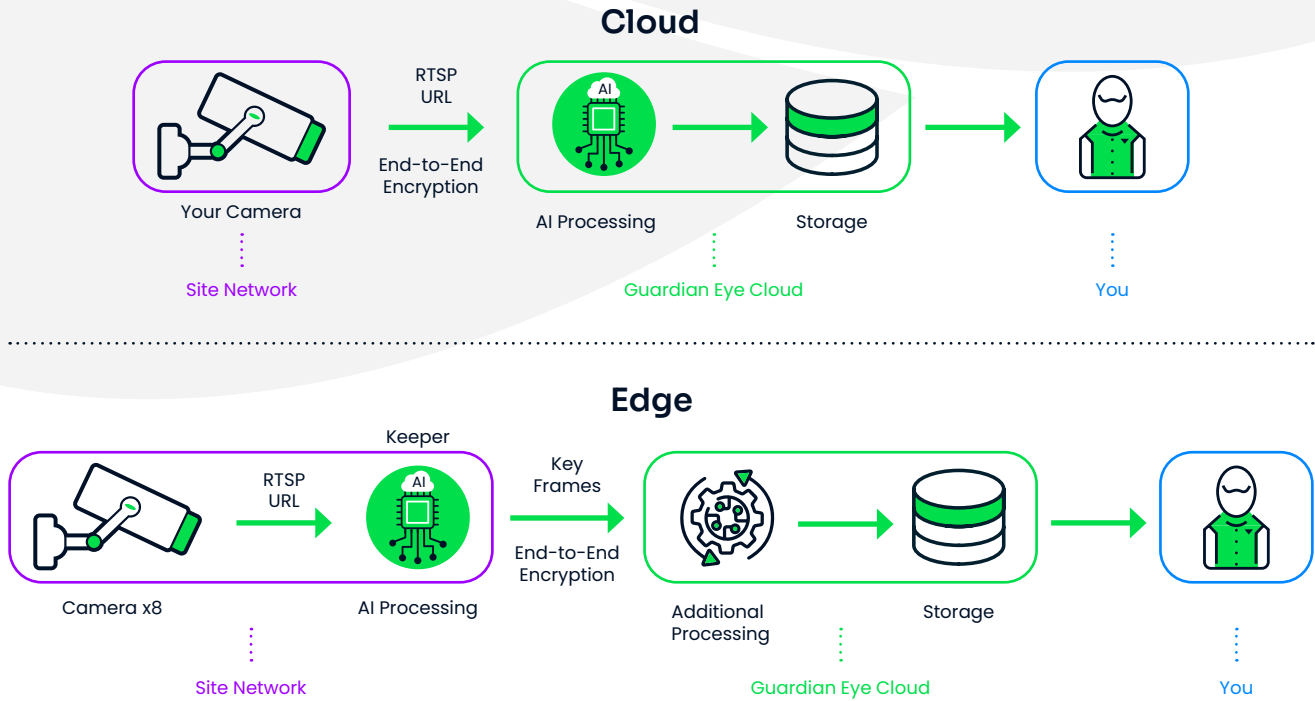

Guardian Eye Intelligent Guarding is a **pioneering way in which CCTV installation is utilised** to monitor and control business premises **via a remote control room environment**. Manned by professional industry accredited personnel, it provides immediate reaction to alarm incidents through **public or directed IP communication to the actual site and by alerting armed response emergency services and the SAPS** where applicable. In addition, full access control can be remotely conducted by our **Guardian Eye Nerve Centre control room**.

This includes **Advanced Analytics, which is changing the face of threat detection** with

powerful machine learning technology that is fast, accurate and live in just five minutes.

Our proprietary real-time video analytics solution puts you in the driver's seat of threat management by allowing you to create **powerful rules around any of your monitoring needs**. Nobody knows your sites better than you do, that's why our analytics engine is intuitive and **fully customisable** to ensure you detect the right threats for every site, camera, and customer - **no coding or technical expertise required**.

How it Works

Features and Benefits

Cost-effective

No need to build costly infrastructure and purchase additional equipment.
