

Door Sensor

Keep Tabs on the Opening and Closing of any Door in your Home

Receive reports or alerts from any connected device via the Guardian Eye Sixth Sense app.

- Robust construction for use indoors as well as outdoors;
- Connects automatically to an IoT-specific network;
- Battery-powered, with battery status available on the Guardian Eye Sixth Sense app;
- The sensors are easy to install;
- Customisable report settings available;
- View the status of your doors via any connected device with the Guardian Eye Sixth Sense app.

Product Overview

IoT (Internet of Things) provides us with the ability to add limited intelligence to the appliances and infrastructure we use every day. By adding Guardian Eye Sixth Sense sensors to your life, you'll be able to view the change in condition of your appliances or infrastructure via our [Guardian Eye Sixth Sense application](#), saving valuable time and money in the process.

Not only does the [Guardian Eye Sixth Sense Door Sensor](#) take the doubt out of whether or not you've left an important door opened or closed, it also gives you the ability to [view the status](#) of that door remotely from any connected device. With

the Guardian Eye Sixth Sense app, you'll also have the option to [only receive alerts for the change of status](#) of the door during predefined time periods.

The sensors [require very little DIY skills to install](#) and connect automatically to an IoT-specific network, so you don't have to worry about adding extra burden to your home Wi-Fi network. The sensors are also [battery-powered](#), meaning load shedding or power cuts won't affect them at all. The life-span of the batteries is determined by the number of activities your sensor is reporting on, and the [battery status](#) can be viewed via the Guardian Eye Sixth Sense application.

How it Works

Features and Benefits

Easy to install on any door

No special skills or tools are needed to install the sensors and they fit on almost every door - including your garage door or pool gate.

Robust, flexible design

The installation isn't permanent, so you can move the sensors wherever you need them. The sensors can be used indoors or outdoors.

No additional network required

Our sensors connect automatically to an IoT-specific network - you're also free to set up your reporting parameters for how long a door can be left open or closed via the Guardian Eye Sixth Sense app.

Battery-powered

No need to worry about an unreliable, external power supply or additional cost to your electricity bill.

Enhance your
home safety
