

# Smart Door Light Wi-Fi Camera

A two-in-one for smart lighting and advanced safety

- Use indoors or outdoors
- 1080p video resolution with colour night vision
- AI-powered person detection and two-way audio
- Features built-in 32G Emmc storage
- View footage 24/7 via camera app
- Easy to self-install

## Product Overview

This product innovatively integrates a brightness-adjustable floodlight with a powerful 4MP security camera to **enhance your home safety at all levels** – even at night. Doubling as a sleek wall lamp, the Guardian Eye Smart Door Light Wi-Fi Camera **fits into any household to light up dark places with remote smart controls**. A security camera at its core, the Guardian Eye Smart Door Light Wi-Fi Camera features AI-powered person detection, active defence, and two-way communication to allow you to **effectively watch over outdoor spaces** such as patios, hallways, courtyards, and more, from wherever you happen to be.

# How it Works

## Features and Benefits

### Adjustable brightness with easy controls on the app

With an adjustable wall light of up to 700-lumen, the Guardian Eye Smart Door Light Wi-Fi Camera provides easy, energy-saving custom lighting with simple controls using the app.

### Superior details with higher resolution

Thanks to its 4MP camera, the Smart Door Light Wi-Fi Camera excels at delivering high-quality imaging with sharp details. It's ideal for even large space monitoring.

### Clear and colourful imaging, even at night

Designed with a large, f2.3 aperture and night vision of up to 10 metres, the Smart Door Light Wi-Fi Camera renders clear images in dim light. Even better, it provides extra support to late-night surveillance thanks to its colour night vision feature, which can be automatically or manually switched on with the use of the built-in light.

### AI-powered person detection for alerts that matter

With a built-in deep learning AI chip, it can detect and differentiate human shapes from other moving objects in real time, improving alarm accuracy and sending you push notifications only when necessary.

### 24/7 protection all around your property

A camera and alarm in one, the Smart Door Light Wi-Fi Camera will automatically set off a loud 100-dB siren and flash spotlights upon detection of suspicious trespassers, making it a vigilant guard for home protection.

### Talk to visitors as if you were there

Hear and talk to anyone at your front door with a tap on your smartphone! The Smart Door Light Wi-Fi Camera comes with a built-in microphone and speaker so you can effortlessly welcome your visitors or turn away uninvited guests anytime, anywhere you are.

### Adjustable camera angle for optimal coverage

The Smart Door Light Wi-Fi Camera has been expertly designed with a wide field-of-view – up to 140 degrees horizontally and 157 degrees diagonally. This feature reduces blind spots in monitoring and provides extra flexibility for camera setup. Manually rotate and direct the camera with your preferred viewing angle for maximum coverage.

### Built-in dual antenna for reliable performance

Using the built-in Wi-Fi antenna, you'll notice far less frustration caused by an unstable Internet connection in your backyard, at your front door, and other locations away from your Wi-Fi router. With wall-penetration and anti-interference capabilities, the dual-antenna handles long-range transmission easily to deliver steady performance.

### It's built to last

The Smart Door Light Wi-Fi Camera features an IP65-rated enclosure, offering high levels of resistance against dust and water. Resulting in long-lasting protection even under the toughest weather.
